

**Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the application.

**Listing of Claims:**

Claims 1-38 (Canceled).

Claim 39 (previously presented): An article of manufacture made from a polymer blend comprising at least one polymer (A) and at least one polymer (B), polymer (A) comprising about 5 to about 99 weight percent of the blend, and polymer (A) comprising a copolymer of about 96 to about 88.4 weight percent of propylene derived units and about 4 to about 11.6 weight percent of ethylene derived units, and polymer (A) is further characterized as having an X-ray diffraction pattern that exhibits more gamma-form crystals than a copolymer comparable in all respects except that it is prepared with a Ziegler-Natta catalyst, and polymer (B) comprising a thermoplastic polymer other than polymer (A).

Claim 40 (previously presented): The article of Claim 39 in the form of a film.

Claim 41 (previously presented): The article of Claim 39 in which polymer (A) comprises about 30 to about 98 weight percent of the blend.

Claim 42 (previously presented): The article of Claim 41 in the form of a film.

Claim 43 (previously presented): The article of Claim 39 in which polymer (A) comprises about 60 to about 98 weight percent of the blend.

Claim 44 (previously presented): The article of Claim 43 in the form of a film.

Claim 45 (previously presented): The article of Claim 39 in which polymer (A) comprises about 75 to about 99 weight percent of the blend.

Claim 46 (previously presented): The article of Claim 45 in the form of a film.

Claim 47 (previously presented): An article of manufacture made from a polymer blend comprising at least one polymer (A) and at least one polymer (B), polymer (A) comprising about 5 to about 99 weight percent of the blend, and

polymer (A) comprising at least about 65 weight percent of units derived from propylene and at least about 4 weight percent of units derived from a comonomer selected from the group consisting of ethylene and an unsaturated monomer other than ethylene, and polymer (A) is further characterized as having an X-ray diffraction pattern that exhibits more gamma-form crystals than a copolymer comparable in all respects except that it is prepared with a Ziegler-Natta catalyst, and polymer (B) comprising a thermoplastic polymer other than polymer (A).

Claim 48 (previously presented): The article of Claim 47 in the form of a film.
